In my spare time, I like to paint characters from animation movies. Animation movies often talk about other countries and this is why I also enjoy traveling. When I travel to other countries, I like to take many pictures and videos. Another hobby enjoy is playing the drums and guitar. There are many types of music I enjoy, but two of my favorite types are blues and rap.

This series of works are inspired by a period of time in my life that has ups and downs. There are always a kind of escaping mental states when I am in a very tormented phase, at which time I feel as if suffering is not as important as the aspiration to escape. You may need a fulcrum to help you escape from this kind feeling. One day I heard a song, I realised that the music could bring people into another world, without any worries. This series of works are the portrayal of the various states of myself that swimming in my own inner world. So when I was making these works, it is precisely my time getting out from the bottom of the personal valley.

Part 4 Creative Painting

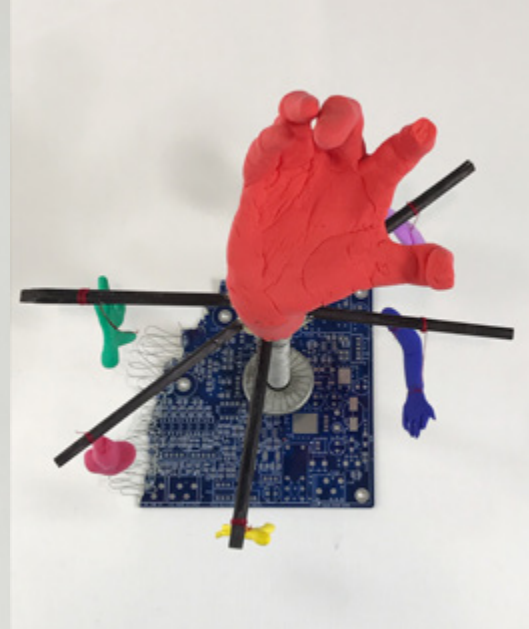

Freely Swimming

Micro-universe

Two pieces works, respectively, the Golgi and the nucleus of cells are enlarged, so large just like the architectures in the world. Things that are so invisible to us in our daily life are indeed real and objective. Maybe our world is just a cell. Therefore, I magnify the micro things in my works, and also want to express that what the invisible objective world in my heart really looks like.

wood stick, circuit board

This is a carousel. I would like to express my understanding of life and some conjectures. Human life does not seem to be decided by ourselves, so who is deciding our existence? Will there be another person who is controlling us? And every one of us is just being manipulated? Much like a carousel, a trojan itself has no sign of life in it, but they are able to move rely on the only engine. And that person, is the only engine in the carousel.

Part 5 Installation - carousel
